

Clipzy User Manual

Version 2026.3

Updated: 26 May 2026

This manual is a complete beginner-friendly guide for using Clipzy effectively and safely. It explains every screen, every core feature, common mistakes, and practical tips for faster daily usage.

Important: Download only content you own or have permission to download. Clipzy does not collect account credentials.

- 14. Best Practices for Productive Daily Use

1) What Clipzy Does

Clipzy is a desktop video download manager focused on speed, clarity, and repeat workflows. Instead of downloading one link at a time manually, it lets you preview metadata, queue many URLs, apply format presets, monitor progress, pause/resume, and keep a usable local history.

- Accepts common web video URLs (including YouTube links).
- Fetches metadata before downloading (title, channel, duration, thumbnail, quality list).
- Supports queue processing for single or batch URLs.
- Offers one-click presets for MP4/MP3 and quality goals.
- Provides controls for pause/resume and cancel operations.
- Stores download history with direct open-file and open-folder actions.

2) System Requirements and First Launch

Operating System	Windows (recommended for bundled executable workflow).
Internet	Required for preview and download.
Storage	Enough free disk space for media files.
Dependencies	Bundled in executable build; Python environment uses yt-dlp and ffmpeg integration.
First Run	Choose an output folder, test one short URL, then apply your preferred preset.

3) Interface Tour

Clipzy is split into three zones: left control panel, right workspace tabs, and bottom status/footer.

- Header: app branding, live status indicator (Idle/Analyzing/Downloading/Paused).
- Single URL area: input one link and run preview or queueing actions.
- Batch Links area: paste multiple URLs, one per line.
- Output Folder: where files are saved.
- Smart Preset + format controls: decide output format and resolution behavior.
- Preview tab: metadata and thumbnail of selected link.
- Queue tab: queue list + run control actions.
- History tab: completed download list with open actions.

4) Core Workflow (Fast Start)

Use this 60-second routine when starting fresh.

- Set Output Folder to your preferred directory.
- Paste a URL in Single URL.
- Click Generate Preview.
- Confirm title/thumbnail/duration and available formats.
- Pick preset or custom format/resolution.
- Click Download This Preview or Add URL to Queue.
- Open Queue tab and click Start Queue if needed.
- After completion, open file from History tab.

5) Feature-by-Feature Guide

5.1 Generate Preview

Purpose: validate the link before any download starts.

- Checks URL structure and extracts metadata.
- Loads thumbnail and estimates available video resolutions.
- Helps avoid downloading wrong content.

5.2 Download This Preview

Purpose: immediately download the currently previewed URL without retyping or manual queue setup.

- Requires a successful preview first.
- Adds preview URL to queue automatically.
- Switches to Queue tab and starts processing.

5.3 Add URL to Queue

Purpose: stage one link for later batch processing.

5.4 Batch Queue

Purpose: paste many links and process them sequentially.

- Paste one URL per line in Batch Links.
- Click Add Batch to Queue.
- Use Clear Batch to reset text area.

5.5 Paste Button

Purpose: quickly paste from clipboard to Single URL field.

5.6 Queue Controls

- Start Queue: starts all queued items.
- Pause/Resume: pauses active transfer loop without clearing queue.
- Cancel Current: stops only active item.
- Cancel All: stops active item and prevents remaining queued items from starting.
- Clear Done: removes completed/failed entries while keeping active/queued.
- Clear Full Queue: removes all queued rows (disabled while processing).

6) Smart Presets Explained

Smart presets are designed for one-click repeat decisions. They reduce confusion and speed up daily use.

Best MP4	Best quality MP4-like output with broad device compatibility.
MP3 Audio	Audio-focused output for podcasts, talks, and music where legally allowed.
720p Fast	Faster downloads with lower file size and solid quality.
Small Size	Compact output optimized for storage or slower networks.

You can still override with manual format/resolution selectors for special cases.

7) Queue, Pause, Resume, and Cancel

Queue processing runs in a background worker thread and updates progress live.

- Use Pause when network is unstable or you need bandwidth for other work.
- Use Cancel Current for a bad link while keeping the rest of batch intact.
- Use Cancel All before changing output folder/preset strategy mid-run.
- Avoid force-closing the app while writing final file metadata.

8) History and File Access

- History stores recent successful downloads (newest first).
- Select an entry from dropdown, then click Open File or Open Folder.
- Clear History removes local history records only; it does not delete media files.

9) Output Folder and File Naming

Set a clean folder structure for better productivity.

- Recommended: separate folders by project/topic/date.
- Keep enough free disk space before large batches.
- Use short and readable folder names.
- If output drive is external, avoid unplugging while queue is running.

10) Safety, Privacy, and Responsible Usage

Clipzy is designed for local desktop use and does not ask for account credentials. For safety, follow operational best practices.

- Only download content you are legally allowed to download.
- Use official app builds and keep files from trusted sources.
- Do not run unknown scripts alongside the app executable.
- Keep Windows Defender/antivirus active.
- Do not disable browser safety warnings for suspicious links.
- Preview first to confirm content identity before downloading.

11) Performance Optimization Tips

- Prefer wired or stable Wi-Fi for long queues.
- Use 720p Fast or Small Size preset when throughput is limited.
- Queue many links once, then let Clipzy run unattended.
- Avoid heavy disk activity on the same drive during downloads.
- Keep output folder on SSD for better write speed.

12) Error Handling and Troubleshooting

Preview fails immediately	Check URL format and internet connection. Try opening URL in browser first.
No available resolutions shown	Some sources restrict format exposure; try another link or preset.
Download canceled unexpectedly	Look at queue notes/status; verify network stability and disk availability.
Cannot open output folder	Folder may have moved or permission changed. Re-select output folder.
App appears stuck	Check if paused state is active. Resume or cancel current item.
Some queued items fail	Continue queue; review failed links later and retry individually.

13) Frequently Asked Questions

Can I use Clipzy for one video only?	Yes. Paste one URL, preview it, then click Download This Preview.
Can I process many links at once?	Yes. Paste all links in Batch Links and add them to queue.
Does clear history delete my files?	No. It removes only history records inside the app.
What if I close while downloading?	Active item may be incomplete; reopen app and queue again.
How do I get fastest downloads?	Use stable internet, SSD output, and suitable preset.

14) Best Practices for Productive Daily Use

- Begin every session by setting output folder and preset.
- Always Generate Preview for unknown links.
- Use Download This Preview for quick single-item jobs.
- Use batch queue for repetitive tasks.
- Review history at end of session to verify outputs.
- Keep a consistent archive naming strategy for long-term retrieval.

End of Manual. This document is intended to be updated alongside future Clipzy releases.
